

## Chain Stopper

### Pelican Hook Stopper

The Pelican Hook Stopper is engineered so that its primary function is to secure the ship's anchor at the hawse. The chain can be disengaged from the stopper by manually deflecting the bail, to facilitate handling, additional handles can be added to the base of the hook should the customer desire. The chain stopper assembly consists of a shackle, chain connecting links, turnbuckle and pelican hook. Each component is forged from fine grain heat treated alloy steel, with a minimum tensile strength of 150,000 psi.
