

Introduction To Verope

SPECIAL HIGH PERFORMANCE WIRE ROPE

Verope stands for competence in special wire ropes. Pierre Verreet, head and founder of verope, has worked in the field of wire rope for more than 20 years. He is an expert on the subject of wire ropes and highly knowledgeable about the world market. Being an expert in all facets of the business, from specification of raw material to production technique, Mr. Verreet has strong worldwide contacts and a sound knowledge of the wire rope market. **Verope** combines long term experience with high-level expertise, and international know-how, reliability and efficiency. Worldwide co-operating specialists make sure that **verope** meet your needs and demands. This ensures top quality, service and price.

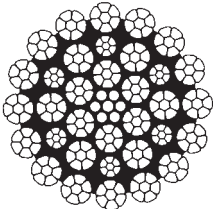

Verope AG has developed a rope design program in collaboration with Swiss engineering company Triamec AG. The new software enables **verope** to develop products which meet the highest technical requirements, and takes into account the effects of compacting and rotary swaging.

SWISS-MADE ROPE DESIGN PROGRAM

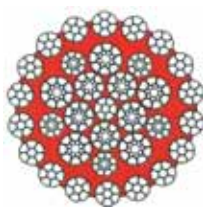

Verope is meeting customers' quality and safety demands by offering special wire ropes made from compacted strands, which are fully lubricated and layered with plastic between the steel core and outer strands. The excellent quality of the materials, the special design and the structural stability of verope special wire ropes improve performance and ensure long-term durability.

verotop

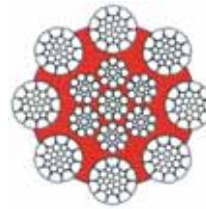

Non-rotating hoist rope in lang's lay execution for tower and mobile cranes.

verotop P

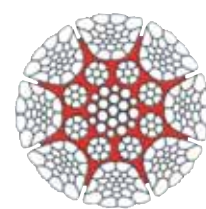

Non-rotating hoist rope in lang's lay execution for deck cranes and in marine environments.

veropro 8

Hoist rope in ordinary and lang's lay execution for container-handling cranes, mobile harbor cranes and lifting applications with guided loads.

veropower 8

High strength hoist rope for crane applications with guided loads.

High Performance

The excellent quality of material, the special design and structural stability of **verope** special wire ropes increase performance most effectively and leads to long-term high performance. Longer service life, superior durability, safety and efficiency are the distinguishing features that make special wire ropes stand out clearly from the regular wire rope. Usually this significant difference between quality results in, significant difference between prices, too. **Verope** and KISWIRE maintain cutting-edge competitiveness in all fields of business, pricing policy included. Lean structure, continuing management innovations, excellent product development, streamlined research analysis, cost reduction, improved productivity and strict quality control. Its efficiency, that leads to our convincing price-performance ratio.

Excellent Quality

These ropes have much higher breaking loads and are more flexible compared to conventional wire ropes. In addition they withstand dynamic forces, provide maximum performance and operate smoothly. The high breaking loads of **verope** special wire ropes give a competitive edge to our customers by reducing the diameters of the sheave and drum and the size of motor and gearbox. Furthermore they allow longer service life due to lower specific stress on the rope. Most important, they assure increased reliability by means of excellent quality and safety. Special wire rope is a product you can rely on. We will focus on developing high value-added products -the next generation of special wire ropes.
